

CSCD 210

Lab 7

I have provided the main method.

- CSCD210Lab7 – contains main and you can't edit this file in any fashion
- CSCD210Lab7Methods – You must write all the methods.

WHAT CODE DO I WRITE?

In main are method calls. You will write the code for each method. There is a folder named doc that contains the API documentation for my solution. Read the API documentation closely and complete the methods based on the documentation.

NOTES

- Remember you will always turn in code that compiles.
- If you have questions, please ask.
- You must use a for loop, a while loop and a do while loop somewhere in your code.
- You can't use the Strings class or the Arrays class or any other classes besides Integer.parseInt and Scanner

WHAT TO TURN IN

- You will turn in a zip of Lab7-Loops that contains your code, my code everything we need to compile and run your program.
- You will need to run your code at least 3 times and submit those runs in a file named cscd210Lab7out.txt.

Your zip will be named last name first letter of first name lab7.zip (Example: steinerslab7.zip)
